GUI for Big Data Storage System
Interdisciplinary Project

Motivation:
At the Gear Research Centre we are developing an innovative artificial intelligence based condition monitoring system with gear damage detection. With the benefit of having a large test facility comes a huge amount of data that needs to be managed.

Your task:
The goal is to develop and implement a graphical user interface (GUI) to manage and interact with a big data storage system. You will analyze our requirements and work on a concept leading to the implementation of a custom-made solution. You will get the chance to bring your creativity and ideas to bear whilst creating a functional and easy to use interface.

Your profile:
- Highly interested in GUI development with knowledge of databases (structured, semi-/unstructured)
- Coding Skills
- Creativity
- Highly motivated and responsible
- Fluent in English or German
