**Project Goal:** Fakebook is a tool, which enables researchers to build a Facebook-like environment and conduct studies in this environment. We are looking for an IDP-student who would like to develop further functionalities for this tool and help with the deployment into a productive environment.

![Frontend of an environment created with Fakebook](image)

**Prerequisites:** Basic Knowledge in Django (Python), HTML/CSS and with web application development is beneficial, but not required. We offer a detailed introduction into the system as well as support and guidance during the IDP.

**Tasks (depending on interests and knowledge):**
- Implementation of Social Media features (e.g. Likes, Dislikes, Flags) in frontend and backend
- Implementation of functionalities for user tracking (e.g. how often a user has clicked on an advertisement)
- Implementation of functionalities for the researcher GUI
- Deployment of the application

**Sounds interesting? Apply now via email:**
