With our no-code platform for brands, IMERO has created a solution to digitize any physical product on the market. All it takes is to install our small connectivity chip into the product (e.g. a mountain bike). Our platform can then be used to create an app that is connected to the product - without writing a single line of code.

For the end user, this app is the digital extension of his/her product: here, in the mountain bike example, he/she can find all the original spare parts to order immediately, or even the best trails in the area.

All products will have such digital features in the future - with IMERO you can create them in just one day!

Your Tasks

- Dive into the existing source code
- Design the user journey
- Create an easy-to-use app editor
- Make it production ready
- Deployment
- Documentation of your work

You will work directly with the founders, be involved in all important decision-making processes and be able to be present during the important first steps. We also want to grow strongly, so that after your graduation you might be interested in joining us.

Why IMERO

IMERO is still at the very beginning of its journey but has enormous growth potential. You now have the opportunity to jump on board!

Develop your own ideas and concepts and put them into practice. Get involved and see how a whole new company takes shape through your work.

Have become curious? Send us your CV and your previous projects, experiences etc. If you have any questions, do not hesitate to contact us by mail or phone.

We also want to grow strongly, so that after your graduation you might be interested in joining us.
