YouRec is a project start-up centered on collection, interpretation and analysis of customer reviews from various online platforms, with the goal of providing automated consultancy services for small companies and businesses. Data is collected from open sources online and fed to state-of-the-art Machine Learning algorithms to produce a set of actionable strategies for the client, in order to strengthen its presence in the market or to expand into new directions.

YouRec is still at the beginning of its journey, but it has enormous growth potential. You now have the opportunity to jump on board!

**We are looking for you, if you:**

- Study computer science
- Have practical experience with at least one programming language (we like python, but are open-minded)
- Are interested in new technologies, especially in the areas of data extraction and manipulation
- Can work proactively and independently
- Have a good knowledge of English

**On top of that,**

- Experience with databases and knowledge of SQL are a plus
- Experience with web data extraction is a plus

**What you will do:**

- Design and implement a scalable architecture
- Develop modules to automatically crawl through online sources and extract data
- Join discussions with relevant stakeholders (e.g., data owners)
- Document your work

**What we offer:**

- Real-world impact: Your modules are used in servicing pilot clients all over the world.
- Responsibility and leadership: Good work and ownership are rewarded, as you can shape your own role in the team.
- Support your studies: We will coach you on your personal agenda and way forward.
- Equity: If your contribution and dedication to the project are deemed important, you’ll be offered shares in the company.

**Your Move:**
